

UNLOCK POTENTIAL

Aspire® combines two forms of boron with potassium into one powerful granule for season-long availability and performance-level yields.

Aspire®

**A SUPERIOR BORON
DELIVERY SYSTEM**
**PERFORMANCE-LEVEL
NUTRITION**

UP TO 60% OF YIELD IS DEPENDENT ON CROP NUTRITION

Some say that's a lot. We say, "Why not more?"

Aspire® is one of many products from The Mosaic Company. All of our products are conceived from the same place – the relentless pursuit of better. They are our answers to the question, "Can crop nutrition do more?" We think it can. In fact, we know it can.

Join us as we continue to explore and advance crop nutrition together, all in the name of smarter products, smarter practices and smarter business.

HARNESS THE POWER OF BORON

A SYSTEM DESIGNED TO DELIVER BORON

- Boron is the second most deficient micronutrient across soils in North America and boron is crucial in achieving balanced crop nutrition in high-yield systems
- Our proprietary Nutriform® technology combines two forms of boron (B) with potassium (K) in every granule for uniform nutrient distribution
- Aspire® is soil-applied, at the roots, ensuring proper boron nutrition is always within reach during key growth periods, from seedling to harvest

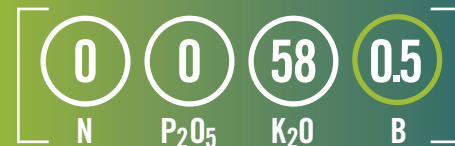

SEASON-LONG BORON AVAILABILITY

- Aspire delivers two forms of boron—sodium borate releases quickly, and calcium borate releases more slowly
- You can feel confident that boron is available when your plants will need it
- The Aspire boron delivery system can significantly improve root development, nutrient uptake and pollination

BOOST YOUR YIELDS AND EFFICIENCY

- Aspire is proven to increase yields across a variety of crops and soil conditions
- Aspire is uniquely designed to provide a flexible spring or fall application window
- Aspire contains two forms of boron with potassium in every granule to increase your operational efficiency as compared to traditional granular blends

NUTRIENT BREAKDOWN

WARNING: Contains Boron. Use of Boron may result in crop injury. DO NOT place this product in direct contact with the seed. Use in accordance with recommendations of a qualified individual or institution, such as, but not limited to, a certified crop advisor, agronomist, university crop extension publication, or apply according to recommendations in your approved nutrient management plan. Do not exceed application rates that could be harmful based on soil type, crop sensitivity and fertilizer placement.

The Directions for Use of the product must be followed carefully. It is impossible to eliminate all risks inherently associated with the use of this product. Crop injury, ineffectiveness, or other unintended consequences may result from many factors including, without limitation, manner of use or application, weather, combination with other products, and crop conditions. All such risks are assumed by the product user.
